Dear Colleagues, Dear Friends,

I am both proud and humble to accept the role of President of the International Society of Gynecologic Endoscopy. This position represents more than an honor—it is a commitment to lead with integrity, uphold the highest clinical and educational standards, and support our shared mission: to advance the field of gynecologic endoscopy through knowledge, technical excellence, and the fundamental belief that access to education is a universal right.

As a non-profit organization, ISGE is dedicated to the dissemination of medical knowledge across all levels of expertise and regions. From foundational techniques to the most advanced procedures, our aim is to provide accessible, current, and high-quality learning opportunities for all healthcare professionals engaged in this discipline.

In the practice of medicine, each of us is an educator—whether we realize it or not. From the moment we assume responsibility for patient care, we begin to teach. This role requires a professional, empathetic, and mature approach from the very beginning of our careers.

Effective teaching involves creating a supportive environment where learning—and the inevitable mistakes that accompany it—are met with respect. The way we respond to those moments shapes us as mentors. True educators correct constructively, guide without diminishing, and inspire through trust. This is the core of andragogy—the science and art of adult education, grounded in respect, diplomacy, and mutual growth.

We must also recognize and dismantle the barriers that limit access to education. Learning must not be viewed as a privilege for a few, but rather as a standard for all. As a global society, we are collectively responsible for ensuring that educational resources reach every corner of the world—so that a student in Kathmandu or Nairobi is just as empowered as one in Berlin or New York.

Among all the skills necessary for learning, focus remains paramount. Sustained, intentional focus on a single topic at a time can lead to exponential progress. It is the same kind of deep engagement we experience when we are truly passionate—when our attention is fully captured by a concept or cause. This level of concentration transforms both our learning process and our professional development.

True expertise is not measured solely by technical skill, but also by one's ability to elevate others. The most impactful surgeons are not only those who operate with precision, but those who empower the next generation to surpass them.

The future of gynecologic endoscopy depends not only on innovation, but on how openly, respectfully, and effectively we share what we know.

Let us teach with clarity.

Let us learn without limitations.

And let us remain inspired—by surgery, by learning, and by the global community we serve.

Thank you,

Anneli Linnamägi

Dear Friends,
It is with deep emotion, immense pleasure, and a profound sense of honor that we welcome you to the 21st Congress of ANGOL, held this year in conjunction with the 38th Congress of ISGE — a historic event for our country.

Hosting an ISGE Congress in Algeria for the very first time is an exceptional privilege, a mark of international trust, and a clear testament to the dynamism and excellence of our scientific community.

By entrusting us with the organization of this world-class event, ISGE recognizes the remarkable energy that drives our country, the commitment of our practitioners, the maturity of our training structures, and the emergence of a new generation of specialists determined to advance the field.

Against the majestic backdrop of the Great Mosque of Algiers, this dual congress will bring together world-renowned experts around an ambitious, rigorous, and innovative scientific program. It will demonstrate Algeria's capacity to unite, innovate, and fully engage in the international dynamics of gynecologic endoscopy.

Yet beyond science, innovation, and technical progress, this congress will also — and perhaps above all — give our guests from around the world the opportunity to discover one of the most precious treasures of our country: the profound generosity, sincere hospitality, and warmth of the Algerian people. Here, welcoming is an art. Sharing is a duty. Honoring the guest is a tradition that transcends us and unites us.

We are proud that our international colleagues can experience this fraternal warmth, which has always been the hallmark of our gatherings and creates an enduring bond between the Algerian medical community and its international partners.

We hope that each participant will leave Algiers not only scientifically enriched but also deeply touched by what Algeria offers at its best: kindness, openness, and the generosity of its people.

Fully aware of the responsibility entrusted to us, ANGOL has mobilized with determination to rise to this honor and to offer a scientific program that is rich, rigorous, and ambitious, meeting international standards and the expectations of our community.

Let me emphasize that this congress is not merely an academic meeting: it is a collective celebration, of a profession that comes together, grows, and builds, year after year, a true culture of quality, innovation, and professional solidarity.

I wish you a fruitful, inspiring congress!
